Creating multiline text box

Use `<textarea></textarea>` tag

Attributes

- `rows="n"`
- `cols="n"`
- `id="controls id"`
- `name="control name"`
- `readonly`
- `placeholder="water mark"`

Example

Create a multiline text box to input address of an employee.

Create another multiline, readonly text box to show the terms and conditions.

```
Address <textarea rows="5" cols="40" id="address" name="address"
placeholder="Enter the address"></textarea><br>
<input type="checkbox"> Agree with terms and conditoin<br>
Terms and conditions <textarea rows="10" cols="50" readonly>
asdfasdfsdf asdfasdfjldjsaflljsadkfj asdkfj
lsajdflljsadkfjdsjsdflljsfjldsajdsf
asdfasdfsdfasdfsdf
</textarea><br>
<input type="submit" value="Submit" disabled>
```

Creating dropdown

Use `<select></select>` tag with `<option></option>` sub-tag

`<option></option>` tag provides **value** property to define the value to be submitted to the server

Country

```
<select id="country" name="country">
  <option value="+91">India</option>
  <option value="+92">Pakistan</option>
  <option value="+93">China</option>
</select>
```

Mixing `<table></table>` and `<form></form>` controls

```
<form>
  <table>
    <tr><td>User ID</td><td><input type="text"></td></tr>
    <tr><td>Password</td><td><input type="password"></td></tr>
```

```
        <tr><td>Gender</td><td><input type="radio" name="gender">Male <input
type="radio" name="gender">Female</td></tr>
        <tr><td>Photo</td><td><input type="file"></td></tr>
        <tr><td valign="top">Address</td><td><textarea rows="5"
cols="20"></textarea></td></tr>
        <tr><td>Country</td><td><select>
            <option>India</option>
            <option>China</option>
        </select></td></tr>
        <tr><td></td><td><input type="submit"></td></tr>
    </table>
</form>
```
